Features of your website

Responsive UX design

The site will adjust the viewing screen and function effortlessly no matter what kind of device the user is viewing it on.

Online Contact Form

The site will provide an easy to use form that prospective clients can contact you on without having to leave the site to use another app such as an email service or call you on the telephone. This will make introductions and enquiries easier to manage for both yourself and your clients. The form will send you a message to your preferred email account for viewing.

Changeable Language Option

To help you reach a global audience the site will default load in English. However for local clients the option will be available to change the language to Swedish. Just click the Language button and the site will reload in Swedish or switched back to English

Site Legend

Home Page

Front Page. Provides an introduction to your business.

Main Page

Provides the most important information for that section

Optional Page

Pages that can be created to provide additional information about yourself, your goals and your past work if you feel its necessary
